

CRITICAL INFRASTRUCTURE: *The Internet of Things and Risks to Homeland Security*

EVENT DETAILS

Date: Dec 20 2017

Time: 1300—1400, EST

Location: HSIN Connect

By 2020 there will be between 20-50 billion Internet of Things (IoT) devices in the world, compared to an estimated 10 billion devices as of 2015. These systems and devices range from brand new, personal, consumer products—light bulbs, televisions, thermostats, etc.—to legacy critical infrastructure systems that have been in place for decades but are only recently being connected to the Internet. This webinar will provide background information on the IoT, and will discuss the risks the IoT poses for Homeland Security and the critical infrastructure community.

REGISTRATION

Register [HERE](#) with your HSIN credentials.

If you are not a HSIN user, follow this [direct link](#) to the webinar at the date and time above.

Intended Audience:

This FOUO webinar is intended for Federal, state, local, and private sector stakeholders and decision makers who are interested in better understanding the risks involved with critical infrastructure systems and interdependencies.

Speaker:

Charles Covell, OCIA
